

Half term	Unit title	Key knowledge/ Content to learn and retain	Essential skills to acquire (subject & generic)	Link to subject ethos and driver	Anticipated misconceptio ns	Links to previous KS	Links to future KS	Opportunity for stretch for high prior attainers	SMSC & British Values	Cultural Capital	Career Link
HT1	Internet safety, cyber protectio n and encrypti on	By the end of this module, students should be able to: <b>Know and understand</b> the key concepts and principles of Computing: Understand a range of malware and the effects they have Know what precautions to take to maintain safety online Understand the role of encryption in maintaining safety online Know about a range of ciphers	Apply knowledge and understanding of the key concepts and principles of Computing: Demonstrate safe practices when using the Internet Use a range of ciphers to encrypt and decrypt text Develop confident and responsible use of modern information technologies Use computer systems safely and confidently	Students show respect towards each other, their teacher and the wider community. Students exhibit wisdom when they know what they have done in a context of where that will lead to, with high levels of engageme nt through a passion for learning and a level of challenge.	Rights as a data subject. The value of personal data to companies. Possible consequence s of security breaches. The difference between firewalls and anti-virus software. Ethics - e.g. different hat hackers.	KS2 – The Internet Communicati on Students have also covered Privacy and security briefly in Y7/8. KS2 outcome - use technology safely, respectfully and responsibly; recognise acceptable/u nacceptable behaviour; identify a range of ways to report concerns about	KS4 - BTEC Tech Award DIT Component 3: Effective Digital Working Practices KS4 computing curriculum. *Note - this is also currently taught in Y8, but as the students are using Boost now this is new to both year groups.	Further research and understandin g of the laws surrounding privacy and security.	From an environment al standpoint students are encouraged to understand the ways that computer systems and parts can be recycled, reused and have extended lives. The understandin g of environment al impacts is taught through lesson themes. Democracy is something students will learn about and will know how to treat	We encourage students to read newspapers We encourage students to watch the news Current affairs are incorporated into lessons Make links to 'real life'	Link to careers in cybersecurity. NC link: understand a range of ways to use technology safely, respectfully, respectfully, respectfully, including protecting their online identity and privacy; recognise inappropriate content, contact and conduct and know how to report concerns.

 		· · ·	 , , , ,	
	Students are happy and demonstrat e a hunger for learning and courage to attempt new tasks and complete current ones. Misconcept ions are corrected and challenged at an appropriate level.	content and contact	others fairly and how to make things work for the whole class as well as the individual. Rule of Law is taught through lesson themes as well with school rules also being adhered to and considered at all times. Individual Liberty – It is important to have students understand their freedoms as well as knowing how these fit in with the school ethos. Students will know their rights as individuals and will know both what to expect and	
			rights as individuals and will know	

									Mutual respect for tolerance of those with different faiths and beliefs, and for those without faith is important Resilience is taught through the lessons when students are pushed to achieve their best, moving out of their perceived limits at times and getting the deserved rewards as a result.		
HT2	Advanc ed spreads heets	<ul> <li>Recap on Basic spreadsho skills from Y7.</li> <li>Understa the structu and use of more advanced functions</li> <li>Understa how to us validation</li> </ul>	of more advanced functions within spreadsheets. <b>Use</b> validation within spreadsheets to minimise user error. <b>Develop</b> and use macros to automate	Progress in computing key topics - application software Progress in computing key topics - data Analyse problems in computatio nal terms Apply K&U	Basic recap will be needed, e.g. formulas start with =, * is multiply etc. Students may need help removing filters once applied. Graphs/chart s - titles.	KS2 outcome: select, use and combine a variety of software (including internet services) on a range of digital devices to design and create a range of programs, systems and	In Y9 students will further develop their spreadsheet skills in the Encryption unit This will be built on further at KS4 should they choose IT as an option.	Explaining and analysing. Evaluation Alternative solutions	Resilience is taught through the lessons when students are pushed to achieve their best, moving out of their perceived limits at times and getting the deserved rewards as a result.	We encourage students to read newspapers We encourage students to watch the news Current affairs are incorporated into lessons	Link to business and how businesses might use spreadsheets *Map to NC outcomes design, use and evaluate computationa I abstractions that model the state and

			Mathematical operators Resilience								which is textual, to solve a variety of computationa l problems. Make appropriate use of data structures (for example, lists, tables or arrays).
HT3 & 4	Revision KS3 assess ments 1 DIRT Algorith ms	Revision KS3 Assessments 1 DIRT Understand the concepts of abstraction, decomposition, pattern recognition and algorithms Know how to read and develop flow diagrams	Use the principles of abstraction and decomposition to produce algorithms to solve a range of problems Write flow diagrams to sequence the steps involved in completing a task Analyse different approaches to solving problems Design algorithms to solve a range of computational problems	Progress in computing key topics Algorithms Analyse problems in computatio nal terms Data Plan creative solutions to problems Apply K&U of the key concepts and principles of computing Develop confident and responsible	Flowchart shapes Mathematical skills - e.g. patterns	KS2 outcomes: use sequence, selection, and repetition in programs; work with variables and various forms of input and output use logical reasoning to explain how some simple algorithms work and to detect and correct errors in algorithms and programs	Links to the KS4/5 IT and Computing curriculums	Challenge work will be built into lessons. Students will attempt more complex tasks and may design more detailed flow diagrams	Resilience is taught through the lessons when students are pushed to achieve their best, moving out of their perceived limits at times and getting the deserved rewards as a result. Mutual respect for tolerance of those with different levels of understandin g and knowledge - peer support. From an environment al standpoint students are	We encourage students to read newspapers We encourage students to watch the news Current affairs are incorporated into lessons Make links to 'real life'	Roles within computing and mathematics *NC statements Design, use and evaluate computationa I abstractions that model the state and behaviour of real-world problems and physical systems Understand several key algorithms that reflect computationa I thinking (for example, ones for sorting and searching); use logical reasoning to compare the

				use of modern information technologie s Logical reasoning Computatio nal thinking can analyse problems in computatio nal terms, and have repeated practical experience of writing computer programs in order to solve such problems					encouraged to understand the ways that computer systems and parts can be recycled, reused and have extended lives. The understandin g of environment al impacts is taught through lesson themes.		utility of alternative algorithms for the same problem Design and develop modular programs that use procedures or functions
HT5	Program ing in Python: Selectio n	Know and understand the key concepts and principles of Computing: Understand how to use selection in Python Understand how to use condition-controlled loops in Python	Apply knowledge and understanding of the key concepts and principles of Computing: Develop working programs in Python to solve a range of problems Analyse problems in	Problem solving Planning Logical reasoning Computatio nal thinking Can analyse problems in computatio nal terms, and have repeated	Boolean operators Spaces in IF statements Code syntax errors	No prior learning is required although familiarity with the terminology and concepts covered by the Programming in Scratch and Programming in Python: sequence modules will be useful but	Programming links to the KS4 computing curriculum. NC outcomes: develop and apply their analytic, problem-solvi ng, design, and computationa I thinking skills	Challenge tasks will be built into lessons - refer to MTP, In this unit, students will be encouraged to show additional skills when they develop their code.	Rule of Law is taught through lesson themes as well with school rules also being adhered to and considered at all times. Individual Liberty – It is important to have students	We encourage students to read newspapers We encourage students to watch the news Current affairs are incorporated into lessons	Computer programmer Use two or more programming languages, a least one of which is textual, to solve a variety of computationa I problems. Make appropriate use of data

HT6	Binary and Comput er Logic	Know and understand the key concepts of computing: Understand binary and why it is used in computing Know how to convert between denary and binary Understand how binary is used to encode text and images Understand the concept of AND, OR and NOT gates and their use in computing programs	Apply knowledge and understanding of the key concepts and principles of computing Carry out binary/denary conversions Encode and decode text and images in binary Analyse problems in computational terms Identify the output from simple logic circuits Plan creative solutions to problems Design an app to meet a brief	Mathematic al skills Logical reasoning Computatio nal thinking Problem solving	Possible confusion over logic gates and truth tables	Students should have a solid grounding in the way place value works in the denary system (units, tens, hundreds, thousands, etc). (KS2 Mathematics) Students should be able to write an algorithm; completing the Algorithms module will prepare them for this module. Students should be able to use Scratch; completing the Programming in Scratch module will prepare them for this module will prepare them for this module.	Programming links to the KS4 computing curriculum. NC outcomes: develop and apply their analytic, problem-solvi ng, design, and computationa I thinking skills develop their capability, creativity and knowledge in computer science, digital media and information technology	Development of app in lessons 2 and 3 GCSE style questions for other lessons can be used as challenge work.	Rule of Law is taught through lesson themes as well with school rules also being adhered to and considered at all times. Individual Liberty – It is important to have students understand their freedoms as well as knowing how these fit in with the school ethos. Students will know their rights as individuals and will know both what to expect and what is expected of them. Mutual respect for tolerance of those with different	We encourage students to read newspapers We encourage students to watch the news Current affairs are incorporated into lessons Make links to 'real life' examples	Link to careers in maths and computer science NC links - Understand how numbers can be represented in binary, and be able to carry out simple operations on binary numbers (for example binary addition, and conversion between binary and decimal). understand how instructions are stored and executed within a computer system; understand how data of various types (including text, sounds and pictures) can be
						prepare them for this			respect for tolerance of those with		(including text, sounds and pictures)

							Resilience is taught through the lessons when students are pushed to achieve their best, moving out of their perceived limits at times and getting the deserved rewards as a result.		binary digits

## Skills developed throughout the programme

## Cognitive skills

- Non-routine problem solving expert thinking, metacognition, creativity.
- Systems thinking decision making and reasoning.
- Critical thinking definitions of critical thinking are broad and usually involve general cognitive skills such as analysing, synthesising and reasoning skills.
- ICT literacy access, manage, integrate, evaluate, construct and communicate.

## Interpersonal skills

- Communication active listening, oral communication, written communication, assertive communication and non-verbal communication.
- Relationship-building skills teamwork, trust, intercultural sensitivity, service orientation, self-presentation, social influence, conflict resolution and negotiation.
- Collaborative problem solving establishing and maintaining shared understanding, taking appropriate action, establishing and maintaining team organisation.

## Intrapersonal skills

• Adaptability – ability and willingness to cope with the uncertain, handling work stress, adapting to different personalities, communication styles and cultures, and physical adaptability to various indoor and outdoor work environments.

• Self-management and self-development – ability to work remotely in virtual teams, work autonomously, be self-motivating and self-monitoring, willing and able to acquire new information and skills related to work.
